

## New Product Announcement

### AZV3001

# Single Channel Low Power Comparator

The AZV3001 is a single channel comparator developed for new generation low-power comparator families. It is ideally suited for battery-powered devices and systems which require low voltage operation.

The supply current typically consumes 6 $\mu$ A and it helps extend battery life in applications.

The AZV3001 operates at a low voltage of 1.3V and is fully operational in the range between 1.6 to 5.5V.

AZV3001 is in miniaturized packages, X2-DFN1410-6 to reduce the space needed on PCB boards.

### The Diodes' Advantage

- **Low Supply Current 6 $\mu$ A/comparator (typ.)**  
Helps prolong battery life and lower system power consumption
- **Internal Hysteresis**  
Provides the immunity towards small voltage fluctuations
- **Low Voltage Operation (down to 1.3V)**  
Suitable for systems with low voltage
- **Miniaturized package options**  
Reduces the PCB board space required

### Applications

- Mobile communication
- Battery powered devices
- General purpose portable devices
- Notebooks
- General purpose low voltage applications
